BIONTOP PROJECT: NOVEL PACKAGING FILMS AND TEXTILES WITH TAILORED END OF LIFE PERFORMANCE BASED ON BIO-BASED COPOLYMERS AND COATINGS

PROBLEM

- Plastic is the preferred choice for packaging of products like food and cosmetics.
- Only 31% of all plastic waste in EU are recycled, 41% is incinerated and 27% is landfilled
- Expensive solution for End of life treatment of packaging

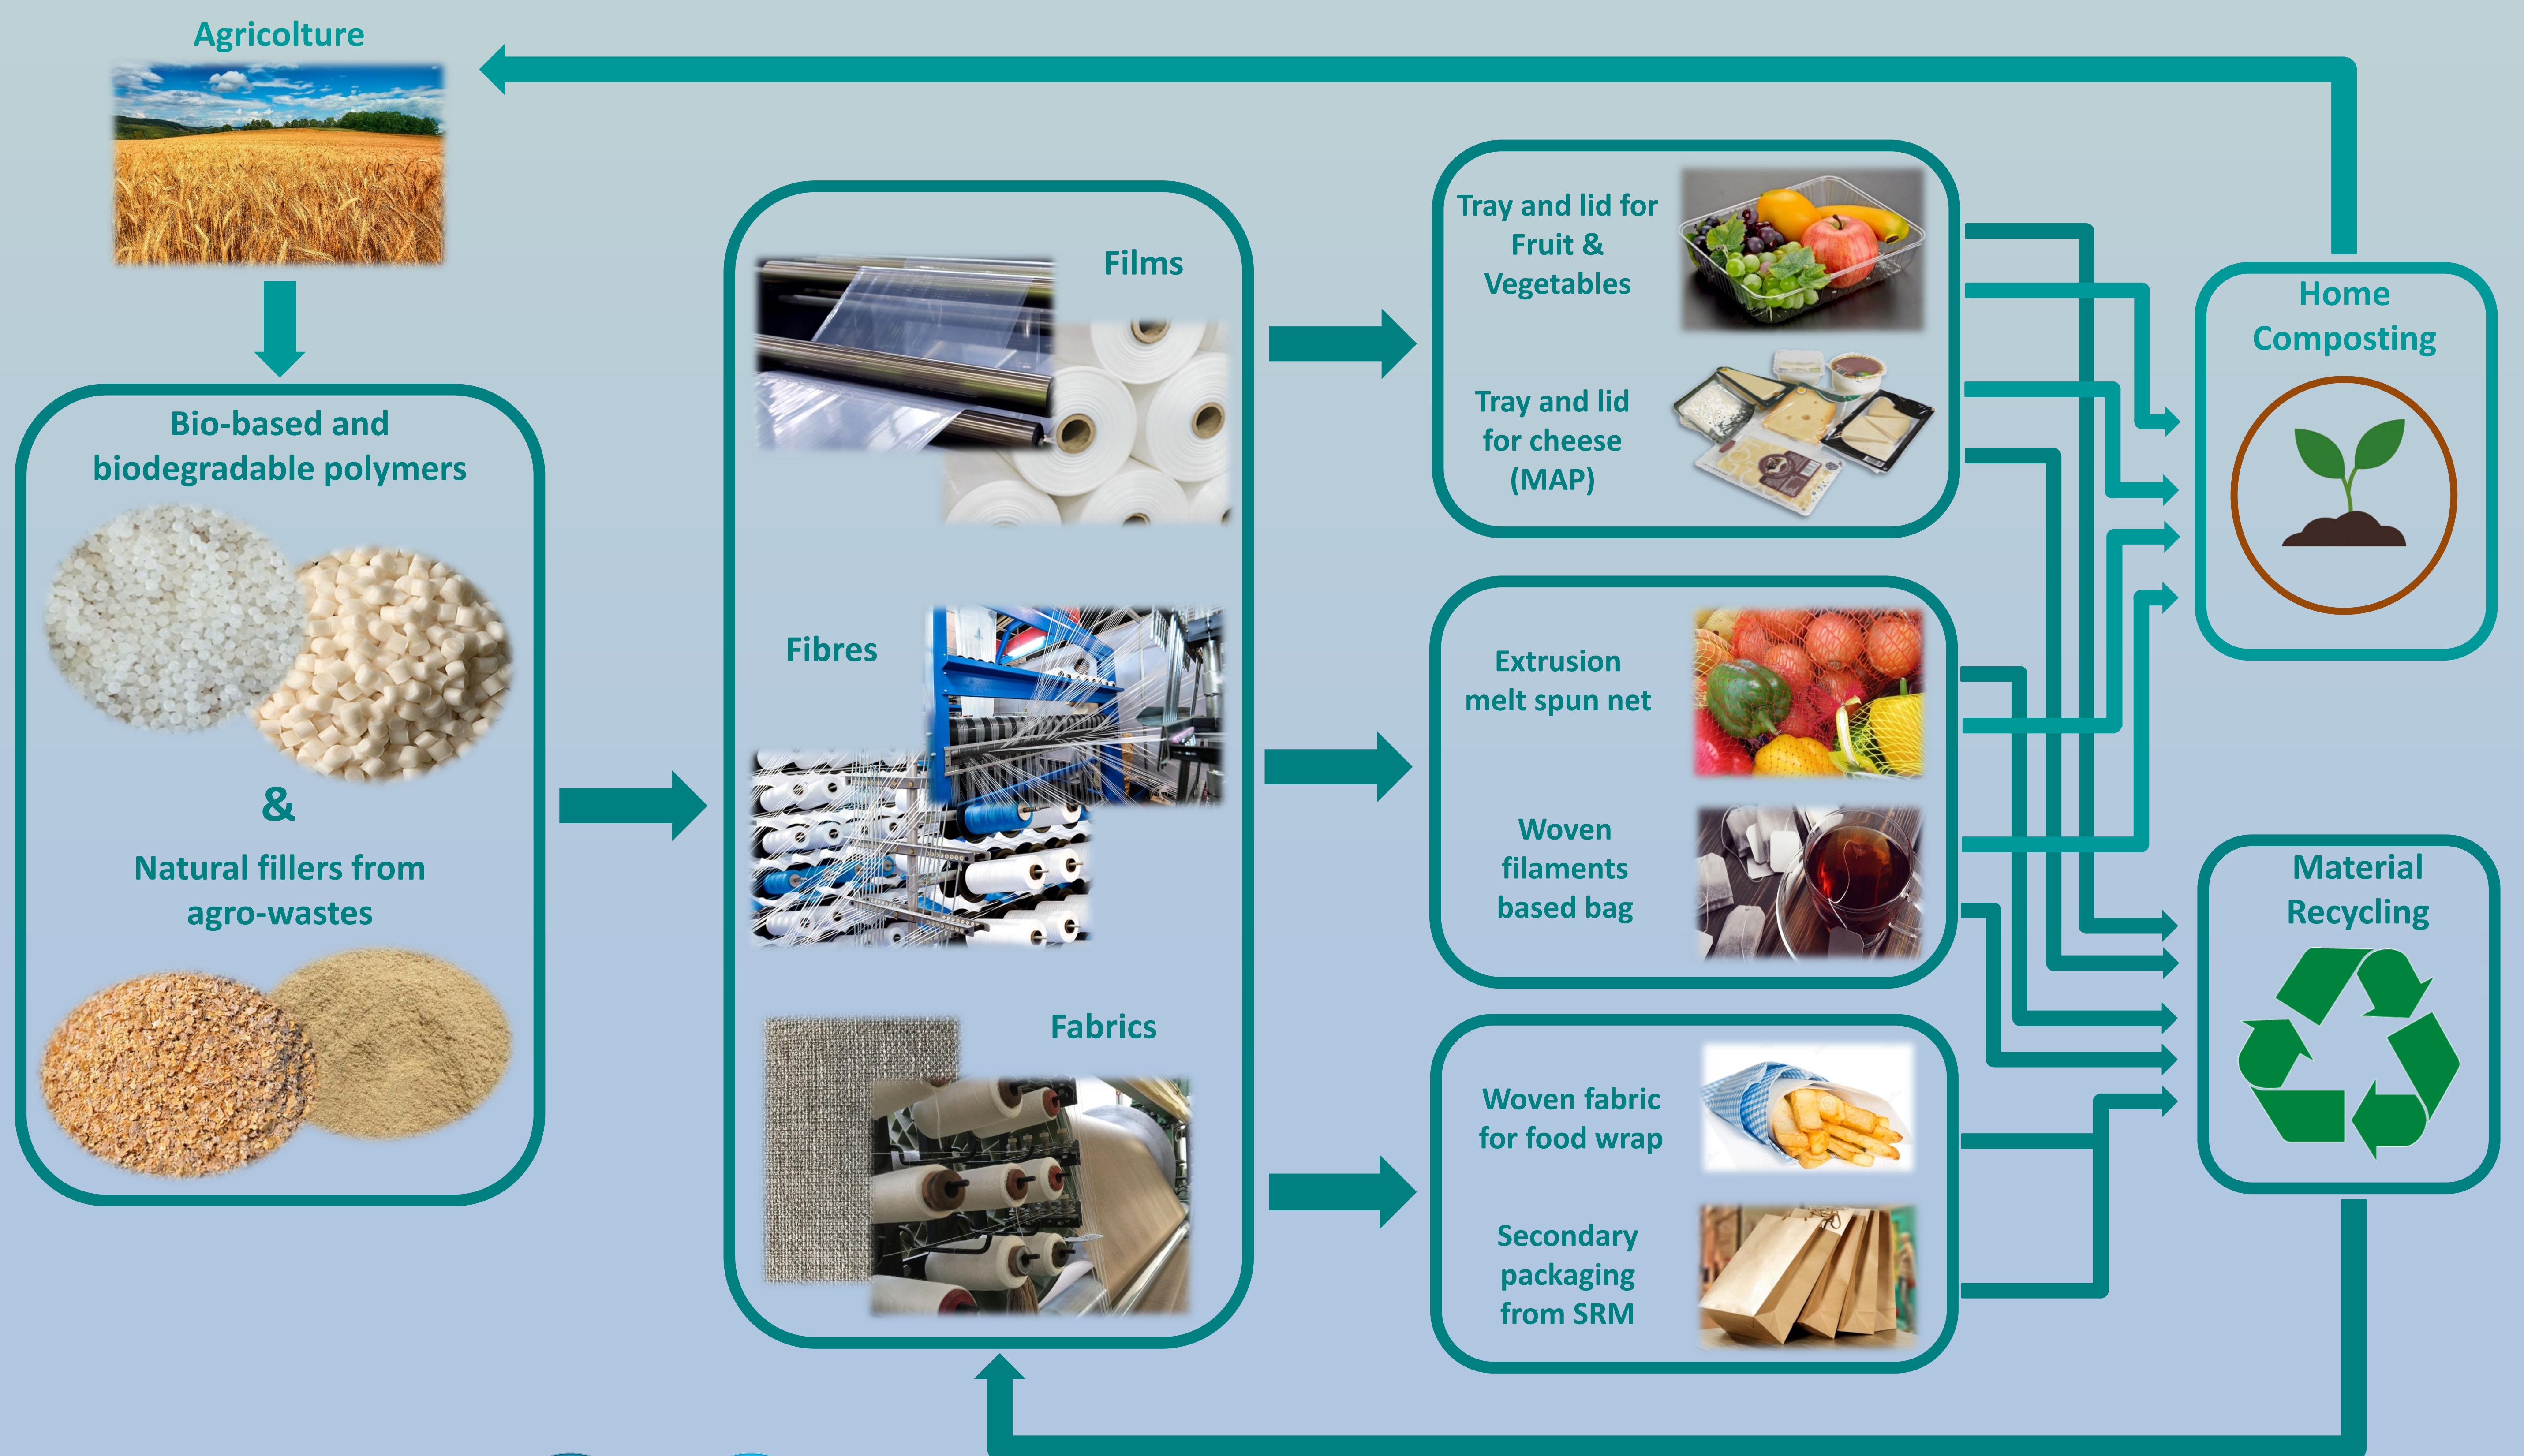

Biobased plastic will become packaging best choice, granting the same standard of protection of plastic.

BIONtop packaging will be compatible with a broad range of packaging applications' requirements but also multiple end-of-life options. Our materials will be biodegradable in home composting conditions but also recyclable for multiple use secondary packaging.

BIONtop will lead to a:

- Reduction of 30% of environmental footprint of plastic waste in EU
- Reduction of cost by 30% of End of Life treatment in EU
- Improvement of a new biobased circular economy
